May 16, 2020

Hi Everyone,

After careful consideration, we have decided to discontinue all of our stamped concrete systems. We have determined that stamp concrete can be a problematic system due to factors such product contamination and risk of over watered concrete from added integral colors from supplier. As a result, we are running the risk of adding air pockets and overworking the concrete slab and consequently creating a weaker surface. Due to the winter climate we have in Michigan, these added air pockets will hold water and will cause the surface of the concrete to scale and crumble at the surface due the expansion and contraction of water during the winter time. All other services such as exposed aggregate and traditional broom finished concrete will continue to be serviced installed.

We are a family a company and we want to continue treating our clients like family, and therefore we want to make sure we our providing our family with the best of services. We value and appreciate all of our clients and we look forward to your continued interest in our products and services. While we regret any inconvenience this announcement may cause, we are still very happy to quote and estimate your future project requirement.

Best Regards,

Rico Lemus
